海富幼儿园 Fortune Kindergarten

28th Anniversary 1998—2026

“海富系幼儿园”隶属于协和教育，始终遵循营造国际化教育氛围，创设和谐、宽松的教育环境和温馨的家庭气氛，融合国际、国内课程，融汇中西方优秀的教育教学方法、实践双语教学，倡导家园共育，满足社会对国际化、差异化的学前教育需求，促进幼儿情感、态度、认知能力、技能等各方面发展。

The first Fortune Kindergarten was founded in 1998. In accordance with the purpose of creating an international education environment with a relaxed and harmonious family feeling, Fortune Kindergartens took the lead in effectively integrating an international curriculum and domestic curriculum in China, striving to offer bilingual teaching with the concept of "East Meets West". In addition, the kindergartens advocate and promote the strategy of family-kindergarten cooperation. On the one hand, it satisfies the needs for international and differentiated preschool education, and on the other hand, it helps realize the well-rounded growth of children. The kindergartens, therefore, cultivate children to be future citizens who are healthy and sociable, full of curiosity, friendly to nature, courageous, confident, having a sense of responsibility with an international perspective, and open to embrace different cultures.

Cambridge Assessment International Education · Diploma Programme · cognia · AP

“协和教育”创始于1993年的上海，秉持“融合中西，和谐发展”的核心价值，是中国最早倡导并践行中西融合理念的专业教育机构，为学生提供PreK–12完整教育体系；现已举办近40所幼儿园、10余所中小学、1个课程中心、并受邀托管若干所公办幼儿园及学校，在校学生来自全球50多个国家和地区；旗下学校主要集中在上海地区，并在江苏无锡、福建厦门以及安徽合肥等地均已有成功开拓办学的范例，已成长为中国最具影响力的优质双语教育机构之一。

Xiehe Education, founded in 1993 in Shanghai, has become a pioneer and leader in the exploration of Chinese non-governmental PreK-12 education. “Developing in Harmony, where East Meets West” is the core value of Xiehe Education, who was also the first to advocate and practice the concept of a Chinese-western integrated education in China. Thus far, Xiehe has already founded nearly 40 kindergartens, over 10 schools, and one academy, with students from over 50 countries and regions around the world. Xiehe has also been invited to host a number of public kindergartens and schools in China. In addition to Shanghai, Xiehe Education successfully operates schools and kindergartens in Wuxi (Jiangsu Province), Xiamen (Fujian Province) and Hefei (Anhui Province). At present, Xiehe Education has grown into one of the most influential bilingual education organizations in China, recognized for its highest-quality education.

editor's note

Our sincere thanks to our cover models Aarohan A., Rei A., Phyllina Erny, Gwenyth Lorence and Hemingway Lorence. Photography by Andy Yang.

Dear Readers,

Last year, I was at an international school interviewing a teacher who came from the UK.

He took a copy of our Shanghai Family School Directory and told me, *"Do you know, when I first arrived in Shanghai, it was this directory that helped me learn about all the schools here, which led me to my job at this school?"*

Months later, I met a young expat mom from Italy at a movie premiere, *"Your magazine was my lifesaver when I first came to Shanghai! We did a a school tour with our kids by ticking off all the schools in there! They are now very happy in their new school! Thank you!"*

In my 13 years of writing for the Shanghai Family Group, I've heard countless stories like these.

However, this issue is particularly meaningful. This is my first time putting together a printed magazine in my new role.

With the help of my patient colleagues and sleepless nights, I am proud to present our labour of love, served in a good old paper magazine - just as it has been all these years.

Here, you will find Shanghai's **top schools** sectioned into categories, 2026 college acceptances of our **Future Movers & Shakers**, feature stories by our expat writers, **The AI Generation by Sunil Damle, Expat Families Who Send Their kids to Local schools by Laurie Mühlauer,** and a lifestyle section on **pet-friendly restaurants and hotels.**

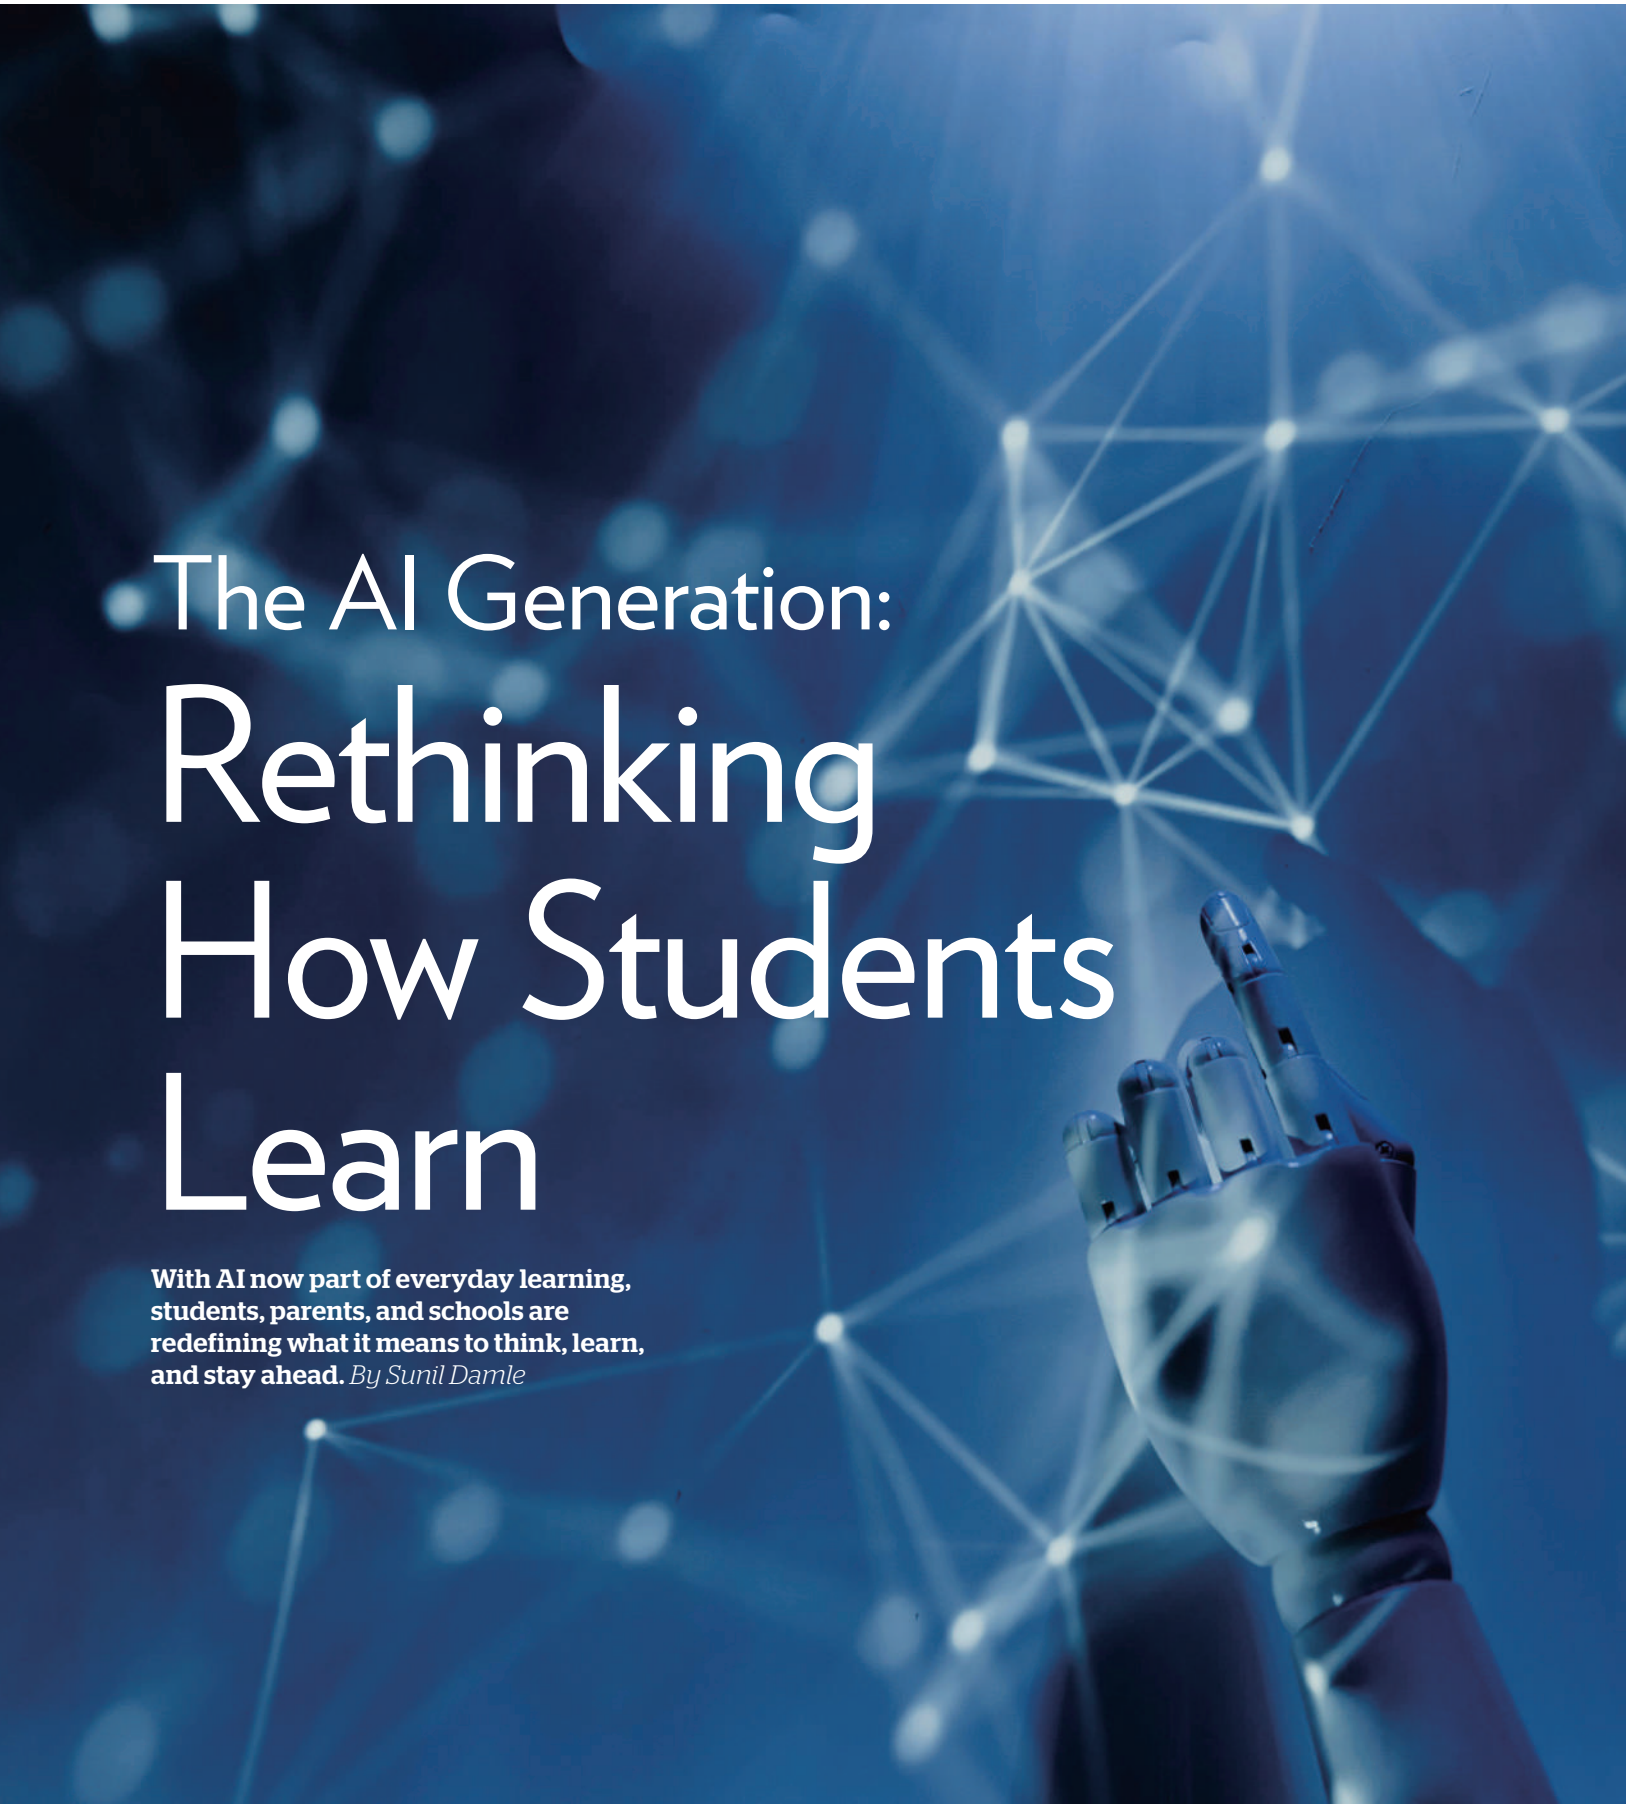

Dog-ear it, scribble in it, tear out your favourite page.

We hope our 2026 – 2027 Shanghai Family School Directory will serve you in whatever way you see fit.

And if you happen to bump into me around Shanghai, I would love to hear how it helped you find your way—just like the stories shared with me over the years.

Eve Wee-Ang
Editor-in-Chief
On behalf of the Shanghai Family Group

The AI Generation: Rethinking How Students Learn

With AI now part of everyday learning, students, parents, and schools are redefining what it means to think, learn, and stay ahead. *By Sunil Damle*

Recently, one of my students told me about a document released by Anthropic, the company behind the generative AI Claude, called the "soul document." The document provides something of a moral compass for how Claude should behave, reason, and interact with humans. My student, whom I am helping develop a project on ethical dilemmas in AI, was fascinated, and so was I.

My conversation with this student stuck with me. Increasingly, I have seen students begin to relate to their AI, viewing it as more than just a software tool, but also a trusted advisor or even a friend. And if I am being perfectly honest, I sometimes use Claude this way too. It just scolded me for running 10 km on back-to-back days. Questions that once were at the back of my mind rushed to the forefront: how much of a role is AI playing in shaping young minds? On balance, is AI a net negative or positive force in education? What comes next?

The Current Situation

Students will use generative AI. According to a study by the Digital Education Council, 86% of students already do. Now, we don't need studies like that to know this. Almost every single one of my students uses AI in some capacity. The problem is that many students don't know how to use AI, over-relying on it to create outputs from scratch without going through the learning process.

Many experts fear this will create a world where young people struggle to think for themselves. This is called "cognitive offloading," and it is something that I am seeing more and more of when students struggle to explain their work to me. Over time, cognitive offloading can sap young people's memory retention, critical thinking, and problem-solving skills. Imagine living in a world where every student has the same writer's voice:

"Whereas others saw weakness, I saw a quiet strength rooted in moral clarity."

In the days before AI, I might have found this idea quite beautiful, but now it feels robotic.

I know scenarios like this are keeping many educators and policymakers up at night.

Creating Boundaries

I think it is important that students and parents set strict guardrails around AI usage. For younger children, say middle school and below, I would advocate for strictly limiting the use of generative AI, much in the same way some parents restrict screen time or TV and internet content.

On the other hand, for high schoolers, I don't think restriction is feasible. Training is the right approach. For my part, I have begun to train my students on how to responsibly and ethically use AI to aid in their learning: brainstorming ideas, creating more effective study guides, and making internet research more efficient.

I thought it would be especially insightful to get the perspective of a Shanghai educator at the ground level of designing best practices around the use of AI in classrooms, so I sat down with Jedediah Friedman, the Lower Secondary Coordinator at Yew Chung International School of Shanghai (YCIS). Jed, a long-time Shanghai educator, emphasized that AI presents both opportunities and challenges.

JEDEDIAH FRIEDMAN,
Lower Secondary Coordinator, Yew Chung International School

"AI provides great opportunities for us to personalize student learning and encourage creative exploration, but it is critical we continue emphasizing the importance of struggle in learning. Students are capable of using these tools to avoid that struggle and create outputs that easily meet academic standards, and this is our main concern."

Jed noted that YCIS is in constant consultation with parents about the role of AI in their children's learning and has created a working group of education thought leaders, parents, and technologists to shape their policies on AI.

Jed is also in agreement on one key point: "Parents should have a conversation with their students about AI in school. It is important to set boundaries about what tools they are using."

Hearing that schools like YCIS are actively thinking about how AI will reshape learning is reassuring. But regardless of how schools adapt to AI, students must see the intrinsic value of going through that "struggle" of learning. I remind all my younger students that the short-term gain of relying on AI now will lead to long-term pain later in high school and beyond.

"Students are capable of using these tools to avoid that struggle and create outputs that easily meet academic standards, and this is our main concern." Jedediah Friedman

The Student Perspective

Of course, I might just be a nostalgic Millennial, quietly lamenting the "old days" before AI-generated content began to pervade our daily lives. But as someone who works closely with high school students, I was curious to move beyond the adult perspective and hear directly from the students. How are they actually using AI? And what do they believe it means for their learning and future?

To get a clearer picture, I spoke with a few students I know.

Ben, a Grade 11 student at Shanghai American School, first encountered AI in ninth grade. (Coincidentally, I was in 9th grade when the first iPhone came out, another paradigm-shifting moment in technological innovation.) "I didn't really see it as a tool, just something to play around with," he recalls. Today, Ben embraces the use of AI as a learning aid rather than a shortcut. "Whenever I forget concepts or need to review content from class, I have AI help explain it to me." He finds this especially valuable in classes like Physics, where abstract theory has to be connected to multiple equations.

"The best thing we can do is to stay adaptable, stay curious, and keep learning new things." Ben

JIANNA,
Grade 11, Shanghai American School

BEN ZHOU,
Grade 11, Shanghai American School

On the other hand, Jianna, also a Grade 11 student at Shanghai American School, initially approached AI with skepticism. "I didn't prefer using AI at first because I was aware of the environmental impact, especially how much water it uses when generating responses, and I felt that it should be a teacher's role to educate students, not AI," she explains. Jianna is still an AI minimalist, but has found some targeted ways to use AI to help her learn. During AP exam preparation, for example, she used an AI-powered platform called Thea Study to generate customized study notes, helping her reinforce factual knowledge more efficiently. "It made recalling information more mechanical and faster," she says, particularly in subjects like history, where memorization plays a key role.

But Ben and Jianna both share the same outlook for the future. Jianna noted, "Our generation will need more advanced and adaptable skills to stay competitive, especially critical thinking and creativity," and Ben adds, "The best thing we can do is stay adaptable, stay curious, and keep learning new things."

The Future

Smart students like Jianna and Ben represent our future and will be tasked with solving some of the world's most critical problems. Unfortunately, they are entering an uncertain workforce where the impact of AI on the job market looks, at times, pretty grim. Speaking of Anthropic and Claude, they recently released a report that should have any student and their parents at least a little spooked. One of the main insights is that AI is particularly good at handling routine, repeatable cognitive tasks, the very tasks that have traditionally formed the backbone of entry-level roles across fields like software engineering, data science, finance, and administrative work.

Then there was the news in February that Block Inc., a fintech company started by Jack Dorsey, the original founder of Twitter, now X, was cutting 40% of its workforce, citing advancements in AI technology.

Yikes. I thought I was entering an uncertain job market in 2013 on the heels of the 2008 financial crisis, but this feels like a whole different level.

I thought it would be instructive to get the perspective of a few parents who hold managerial roles themselves but are also raising children who will be entering this uncertain workforce in the near future.

Richa Chawla is the Head of Production for Global Sourcing at H&M and has a daughter who graduated from Shanghai Community International School and is now at Cornell University. Richa's personal outlook is that while "AI might replace analytical skills, the application of solutions requires human ability in decision-making where creativity is important." As a result, she encourages young people to "stay curious and agile" and reminds them that "human evolution is a journey of constant learning and change. I always ask my daughter, what is your plan B? And sometimes C, D..."

RICHA CHAWLA, Head of Production for Global Sourcing at H&M

Jun He, an Executive Director at leading venture capital and private equity firm HongShan, is thinking deeply about these questions over the long run, considering his daughter is still just in elementary school at Concordia. He pointed to judgment as one skill that can't be easily replaced by AI. "Knowing what questions to ask, knowing how to absorb the information available and identify the next step" is crucial. He also encouraged young people to fully embrace AI and stay on top of how to use available tools: "Experiment with it yourself. It is very important to gain fluency in all of the new AI tools. These tools will eventually be the Microsoft Excel or Word type core competencies employers require."

JUN HE, Executive Director at leading venture capital and private equity firm HongShan.

"It is very important to gain fluency in all of the new AI tools. These tools will eventually be the Microsoft Excel or Word type core competencies employers require." Jun He

These insights largely echo my own thinking. I strongly encourage my students to focus on developing EQ (emotional intelligence) and SQ (social intelligence). Strengthening EQ and SQ helps students develop the critical thinking and relational skills needed to seize entrepreneurial opportunities and differentiate themselves within organizations. Extracurriculars like debate, Model UN, and team sports provide students with great opportunities to develop the human skills that will matter most in the future.

In addition, before seeing my students off to college, I personally recommend that they pair a flexible, adaptable major with a more niche skill or subject. For example, I studied both International Relations (broad) and Chinese (niche). Arguably, it was learning Chinese, and taking the leap to study abroad in China, that opened the most doors in my career. I encourage my students to think similarly: add a niche layer to your education to make yourself more distinctive and marketable. Think astrophysics and computer science for companies like Blue Origin or SpaceX. Or Arabic and economics, which could position you for roles that require regional, cultural, and linguistic expertise.

Third, and perhaps most importantly, students need to be adaptable and ready to go with the flow. On this point, I actually find myself agreeing with the diverse voices I spoke to for this article.

The AI revolution is here.

Now, we've seen versions of this story before. First, it was the internet. Then smartphones. Then social media.

However, I think it is clear that this revolution is fundamentally different. This will be the first major technological shift that will irrevocably change our relationship to intelligence itself. Not just how we access or share it, but perhaps whether we choose to outsource it altogether. This feels somewhat ahistorical and much scarier.

Like every technological revolution before, the younger generations will not just participate but be at the cutting edge of embracing it. What is clear is that, when used correctly, AI can be a positive force for learning and improving. The real question is whether we, as a society, will make the individual and collective choice to use it in ethical and productive ways. Will students use this moment to deepen their thinking and help lead the next wave of innovation? Or will they slowly outsource that thinking and follow along?

If it's the latter, I worry students risk becoming passengers in a rapidly changing world, one that won't wait for them to catch up. But if they seize this moment and learn to use AI as a force multiplier for their own original thinking, then I genuinely believe there is no problem we can't begin to solve. Fortunately, inspiring students right here in Shanghai like Ben and Jianna give me hope.

And now, time to ask Claude for its feedback on this piece. It would probably tell me to avoid sweeping claims, be a bit less convinced by my own metaphors, and, if possible, add a touch more soul.

Fair enough.

Sunil Damle is our Shanghai Family education writer and is also the Co-Founder and Director of College Counselling.

Future Movers & Shakers

The next generation of international school graduates shaping ideas, solving real-world challenges, and stepping into what comes next

Across Shanghai's international schools, this year's graduating students are stepping into the world with curiosity, purpose, and a strong sense of direction. Shaped by years of learning, competition, friendship, and discovery, they are not only choosing what to study next, but also thinking deeply about the kind of impact they want to make. From tackling global challenges to pursuing creative ambitions, these students offer a glimpse into a generation ready to move forward with intention.

Concordia International School Shanghai

What sparked your interest in this field?
I've been reading for as long as I can remember, so enjoying literature has always come as second nature. However, it took a while longer for me to discover my interest in education, and it almost happened without me noticing. One day, I looked at my extracurriculars and realized that nearly all of them were related to education in some way.

If you could solve one world problem, what would it be?
Wealth inequality, because it is important and impacts so many people.

What is your favorite memory from your time at school?
I think it would be the countless mundane jokes that somehow became ten times funnier in class with a friend by my side, or the time I spent with my track team playing Grounders, rolling across the field, and goofing off.

A mentor who inspired you
My track coach, Dr Mizel, has had a really big impact on me, and he has taught me not only about perseverance and hard work, but above all, to believe in myself.

Rei A.

University
Columbia University
Intended Major
Comparative Literature / Education / TBD

"Traveling the world, helping others."

What sparked your interest in this field?
What sparked my interest in business was the classes and extracurricular activities offered at Concordia. Courses like AL Business & Finance and AP Economics, along with extracurriculars like NEC (National Economics Challenge), made me realize that business was the right path for me.

If you could solve one world problem, what would it be?
I would solve climate change. Climate change is one of the biggest problems in the world right now, not only because of its short-term and long-term consequences, but also because of its connection to other issues in the world.

What is your favorite memory from your time at school?
My favorite memory at Concordia was my junior year APAC Table Tennis. That year, we brought back our first-ever championship for both the boys' and girls' APAC Table Tennis teams.

A mentor who inspired you
Mr Erik Paulson inspired me as a teacher, a table tennis coach, and a role model. I learned from him that, apart from academic and monetary success, there are many other, far more important things in life.

New York University, Stern School of Business
Intended Major
Business

"Work hard. Play hard."

Cindy Wang

University

University of Hamburg

Intended Major

Human-Computer Interaction

"I love the combination of computer science, design and psychology."

German School Shanghai (DSS)

What sparked your interest in this field?

Even from a young age, I've always been drawn to design and media, which is why I chose to study Human-Computer Interaction, a subject that combines creativity with technology. I love the combination of computer science, design and psychology.

If you could solve one world problem, what would it be?

Having lived in two different cultures (Germany and China), I have realised the importance of building mutual and intercultural understanding, rather than holding onto one-sided perspectives. I believe that doing so can help reduce political divisions and foster a more inclusive society.

What is your favourite memory from your time at school?

For me, the best moments at school were always connected to the friends I made there. Whether it was the regular school routine or class trips, I had a lot of fun with them and made some of my most memorable experiences.

What do you hope your future self will be doing 10 years from now?

In ten years' time, I hope to be working on innovative technologies that enhance people's daily interactions with digital products.

Shanghai French School / Lycée Français de Shanghai

Suren Duan

University

McGill University

Intended Major

Math, Physics, and Computer Science

"I'm an optimist, always, that the world can be a better place."

What sparked your interest in this field?

What captivates me in physics is how it constantly transforms the way I view the world. In competitive sailing, which I practice, for example, it explains why my boat stays afloat and helps me control my boat better in strong winds.

If you could solve one world problem, what would it be?

If I could solve one problem in the world, it would be the high cost of medical care. Getting life-saving operations and medicine should not be so expensive that some people have to consider sacrificing everything they own to extend the lifespan of their loved ones. This is why I want to work in the medical sector in the future, finding better and cheaper alternatives to current treatments.

What is your favourite memory from your time at school?

I think my favorite memory from my time at school would be playing with friends during the CAPB (Asia-Pacific Badminton Cup) held at the Shanghai French School, with competitors from more than 10 other international schools from the Asia-Pacific region, as I really enjoy playing badminton and it will probably be the last time I attend a competition with them.

What do you hope your future self will be doing 10 years from now?

I hope that in the future I will be using new emerging technologies to advance the healthcare sector and develop cheaper treatment options.

Tiffany Yuan Yuan Zhao

University:

TBD

Intended Major:

Film & Philosophy

Wellington College International Shanghai

What sparked your interest in this field?

I've always been a kid who had too much to say, but it was growing up constantly exposed to the arts that made me finally realize there's actually a way to make all the art forms I love come together and tell the stories I wanted to let the world know. And for me, that way was cinema.

If you could solve one world problem, what would it be?

"Cringe culture," the fear of being seen caring about anything, has made sincerity embarrassing. Rewarding apathy over passion, many young people like to call dream-chasers "tryhards." This hyper-self-awareness breeds performative cynicism, discouraging creativity and risk-taking simply to avoid failure. But to me, a society terrified of looking foolish is a society that stops moving forward.

What is your favorite memory from your time at school?

Last year, I spent two whole days at my friend's house directing my first short film, starring all of my friends. Day until night, we were filming nonstop, and although it was tiring, it was the happiest I could've been.

What do you hope your future self will be doing 10 years from now?

I hope to have my first feature film made and be working towards an Oscar.

"A society terrified of looking foolish is a society that stops moving forward."

Loh Jun Kai

University:

TBD, received conditional offer from The University of Hong Kong and others

Intended Major:

Physiotherapy

"Consistently striving to become a better version of myself."

What sparked your interest in this field?

Several job shadows/internships and my passion for sports and human biology sparked my interest in health sciences, specifically physiotherapy. Witnessing meaningful real-world interactions between physiotherapists and their patients cemented my interest in pursuing this career.

If you could solve one world problem, what would it be?

Deepfake photos and videos created with malicious intent lead to scams and erode trust. Solving this problem would help restore trust in media content and protect people from harm.

What is your favourite memory from your time at school?

My favourite school memory isn't one big moment but the everyday little things – hanging around with friends, having a laugh, and feeling part of a tight-knit community.

Yew Chung International School of Shanghai

XU Sarah

University:

TBD, received conditional offer from The University of Hong Kong and others

Intended Major:

Early Childhood Education and Special Education

What sparked your interest in this field?

My interest in early childhood education began as a child (around 7 years old) when I noticed how naturally I connected with babies; that spark grew through years of teaching/presentation activities and community service. The sense of accomplishment and joy I felt when helping children learn confirmed this was the path for me.

If you could solve one world problem, what would it be?

If I could solve one problem in the world, it would be food scarcity, as it is one of the most fundamental barriers to survival and health. As hunger underpins many global issues, ensuring everyone has access to food would create a strong foundation for addressing the rest.

What is your favourite memory from your time at school?

My favourite memory is the Year 12 EOTC trip to Bali, where we immersed ourselves in the local culture and formed a unique bond with our teachers. This experience broadened our horizons and deepened our understanding of different cultures.

What do you hope your future self will be doing 10 years from now?

Working as an educator in an international kindergarten, creating a warm and safe environment where children grow and discover their potential.

"Progress is more important than perfection."

How Much Do Teeth Really Affect Your Appearance?

Parkway shares why your smile shapes first impressions more than you think. *By Dr. Nikola Urosevic*

When we meet someone, we form impressions within seconds—and the smile sits at the centre of it all. Before skin, before subtle features, we notice teeth: how bright they are, how evenly they align, and how naturally they fit the face.

A well-balanced smile doesn't just change how you look—it changes how you carry yourself, how often you smile, and how confident you feel.

Why Teeth Have Such a Strong Visual Impact

Brightness = Freshness

Teeth reflect light into the face. When they appear dull or stained, the entire face can look tired or aged. Subtle whitening, done well, restores a natural vitality.

Symmetry = Harmony

The human eye is wired to recognise balance. Even minor misalignment can disrupt facial harmony, which is why small orthodontic adjustments often make a noticeable difference.

Support = Youthfulness

Teeth support the lips. When worn down or misaligned, the smile can appear flatter or sunken—creating an unintended aging effect.

Natural Always Wins

One of the biggest misconceptions is that whiter is always better.

In reality, the most attractive smiles have:

* soft, natural shade variation
* gentle translucency
* tones that complement skin

The best dental work is the kind you don't notice—only that someone looks refreshed and confident.

What Actually Looks Refined

True elegance in a smile comes from balance, not perfection:

* natural texture rather than flat surfaces
* healthy gums
* proportions that suit the face
* a smile that looks good in motion

Overly "designed" smiles often feel artificial. Subtlety always ages better.

Simple Ways to Improve Your Smile

Most improvements are surprisingly conservative:

* professional cleaning and whitening
* minor bonding to refine edges or close small gaps
* discreet aligners for alignment
* veneers only when necessary

Often, two small adjustments create a more natural result than one dramatic change.

More Than Aesthetic: The Confidence Effect

When people feel comfortable with their smile, they:

* smile more freely
* speak with greater confidence
* appear more approachable

A great smile doesn't change who you are—it simply allows you to show up fully.

Take-Home Message

A beautiful smile isn't about perfection. It's about harmony, health, and confidence.

Parkway Dental: Trusted Care for the Whole Family

At Parkway Dental, patients receive high-quality care under strict international hygiene standards, delivered by a multidisciplinary team of experienced dentists and orthodontists.

Comprehensive Dental Services

* General Dentistry – personalised diagnosis, treatment, and prevention

Expert in aesthetic restorations, crowns, and pediatric dentistry

Dr. Mikaela Zeng
Orthodontics specialist focusing on early intervention and facial development

Dr. Jenny Wang
Experienced in comprehensive treatment planning, implants, and emergency care

Dr. Min Zhong
Focus on pediatric development and early orthodontic intervention

International School Curriculums at a Glance

Learn the lingo of high school curriculum.

When choosing an international school for your child, families should consider the bigger picture and whether they will be returning home or if another international move is in their future. To help parents in selecting the appropriate curriculum for their child, here is a quick guide.

International Baccalaureate

International Baccalaureate Organization (IB) offers programmes at four different levels: PYP (Primary Years Programme, ages 3-12), MYP (Middle Years Programme, ages 11-16), DP (Diploma Programme for secondary school, ages 16-19) and CP (Career-related Programme).

- The IB programme encourages students to think critically and independently, with inquiry-based tasks. IB Diploma candidates will focus on six individual topics for graduation of secondary school.
- IB Diploma graduates, depending on their final test scores, can have classes taken applied to university credits. However, it is important to do your due diligence, as each university will have different policies about credit transfers.
- This European-based diploma certification is recognized worldwide.

Advanced Placement

Advanced Placement (AP) is a program developed and administered by the College Board, the organization responsible for the SAT (formerly known as the Scholastic Aptitude Test), allowing students to obtain college credits while still in high school.

- AP classes give students the experience of an introductory level college class that qualifies learners for more advanced classes upon entrance to North American colleges.
- Nearly all American and Canadian universities accept AP scores for credit. Again, it is important to do research, as each university will have different policies about credit transfers.
- It is not a two-year requirement compared to the IB Diploma programme or A-Levels.
- It is an American-based diploma certification recognized mainly in the USA and select universities worldwide.

IGCSE

The International General Certificate of Secondary Education (IGCSE) is a British curriculum which prepares students for the IB and A-Level examinations. English language is the heart of the curriculum, ensuring students' ability to communicate fluently in the world's most widely spoken language.

- The IGCSE programme is a precursor to A-Level, AP, and IB certification, and is completed in the first two years of high school.
- It is an exam-based curriculum that tests the knowledge of individual subjects, awarding one IGCSE qualification for each successful subject exam.
- There are three types of board exams for the IGCSE: Cambridge IGCSE, Pearson Edexcel International GCSE and Oxford AQA. They all take place during different times of the year.

A- Levels

A-Level exams are subject-based qualifications achieved as part of the General Certificate of Education (GCE) offered in the UK curriculum courseware. This is particularly relevant for students in secondary schools.

- A-Levels are required for university entrance, and conditional acceptance by UK post-secondary institutes are based on students' grades.
- Students can expect to take three A-Levels in order to obtain offers from various universities, and most pick courses based on their desired degree.
- Many of the higher-level degree subjects do require specific A-Levels for acceptance to the programme, so it is important to research university requirements before starting the programme.

French Baccalauréat

Also known as Le Bac, it is the secondary school national curriculum in France that is internationally recognized and prepares students for higher education worldwide. It has a reputation of being rigorous and has subject specializations, leading many global universities to grant college credit to Baccalaureate holders.

- Examinations include a written French exam and an oral French exam in 11th grade, a philosophy exam, Grand Oral exam, and two special subject exams in 12th grade.
- Students take a wide range of subjects, including literature, math, sciences, history, philosophy, and languages. Students can specialize in sciences, humanities, or economics.
- There are three categories of Baccalauréat: general, professional, and technological. General is the most common, and students can choose from three different streams: Literature (bac L), Sciences (bac S) and Economics and Social Sciences (bac ES).

German DIA

The Deutsches Internationales Abitur (DIA) is the German international high school diploma that provides students with a globally recognized university entrance qualification.

- It's designed to be comprehensive and encourage independent thinking and problem-solving, allowing students to develop their talents in various areas before specializing in a field of study in grade 12.
- In grades 11 and 12, students choose a set of subjects and participate in exams to demonstrate their knowledge and skills.
- Students are encouraged to develop proficiency in at least two languages, often including German and another language like English, French, or Mandarin.
- DIA curricula can include various subjects like History (bilingual), Geography (English), Physics, Chemistry, Biology (bilingual), a second foreign language, religious studies, art/music, and physical education.

Japanese EJU

The Examination for Japanese University Admission for International Students (EJU) is a standardized test used to assess the academic abilities and Japanese language proficiency of international students applying to Japanese universities.

- The EJU consists of four main subjects:

  Japanese as a Foreign Language: Assesses reading, writing, and listening comprehension.

  Science: Requires selection of two subjects from Physics, Chemistry, and Biology.

  Japan and the World: Covers a range of topics related to Japanese and world history, politics, and society.

  Mathematics: Students choose between Course 1 (for liberal arts/science) or Course 2 (for higher-level programs).

Hong Kong HKDSE

The Hong Kong Diploma of Secondary Education (HKDSE) is a standardized examination for senior secondary school students. It serves as a qualification for university admissions.

- Students typically take four core subjects: Chinese Language, English Language, Mathematics, and Liberal Studies/Citizenship and Social Development, along with one to four elective subjects.
- It's considered difficult, particularly for core subjects like Chinese and English.
- Grades are assigned on a scale of 1 to 5, with 5* and 5** indicating the highest levels. Many students aim for a "3322" score of at least a Level 3 in Chinese and English, and at least a Level 2 in Mathematics and Liberal Studies to meet basic university admission requirements.

One Exam, Three Pathways:

Why HKDSE Is the Smart Choice for Global Families

In 2025, over one million students will sit for A-Level and IB exams—competing for a fixed number of places at top universities.

Meanwhile, just over 50,000 students will take the HKDSE. And over 30% of them will secure a spot at Hong Kong's top eight universities, including three ranked among Asia's best.

For internationally minded families in Shanghai, this isn't just a number—it's an opportunity. If your child excels in STEM, is comfortable with English, and could benefit from a globally recognised qualification that plays to their strengths, the HKDSE might be the strategic advantage you've been looking for.

What Makes HKDSE Different?

The Hong Kong Diploma of Secondary Education (HKDSE) is Hong Kong's university entrance examination, recognised by universities across the UK, US, Canada, Australia, Singapore, and Chinese mainland.

But one feature sets it apart: it is the only international qualification that allows students to answer exam papers in either Chinese or English (except the English Language paper). For students who think deeply in Chinese but need a globally recognised credential, this removes the language barrier and lets their true academic ability shine.

A Curriculum That Plays to Strengths

HKDSE students take four core subjects:

- Chinese Language
- English Language

• Mathematics
• Citizenship and Social Development

Plus two to three electives—such as Physics, Chemistry, Biology, Economics, or Extended Mathematics.

This structure lets students focus on what they're good at. A maths-focused student can double down on STEM subjects without being forced into areas that dilute their strengths. Depth, not breadth, is the goal.

Why Families Are Choosing HKDSE

1. Answer in Your Strongest Language
Science, maths, humanities—all can be tackled in Chinese. This isn't a shortcut; it's a more accurate measure of ability.

2. STEM-Friendly
HKDSE provides formula sheets and permits approved calculators. Less memorisation, more problem-solving—exactly what top universities value.

3. Scoring That Rewards Strengths
The system focuses on your best subjects. A few exceptional grades can carry significant weight—ideal for students with clear academic passions.

4. Flexibility
The exam period spans over a month, and results are valid for two years. Students can combine their best scores across sittings, reducing the pressure of a single exam week.

One Qualification, Three Pathways

HKDSE opens doors to three distinct higher education systems:

- Hong Kong: Apply to all eight public universities, including HKU, CUHK, and HKUST.
- Chinese mainland: For students holding a Home Return Permit, direct admission to over 145 top universities, including Tsinghua, Peking, and Fudan.
- Overseas: Recognised by universities across the UK, US, Canada, Australia, and Singapore—often without additional entrance tests.

YCIS Shanghai: HKDSE Close to Home

In 2025, Yew Chung International School of Shanghai launched its HKDSE programme—one of the first international schools in the city to do so. Backed by the Yew Chung Yew Wah Education Network with over 90 years of history, YCIS brings deep experience from HKSAR, Chinese mainland, the UK, and the US.

- Bilingual by Design: Subjects are taught in English (except Chinese Language), giving students the academic English skills they need while preserving the ability to express complex ideas in Chinese.
- Expert Faculty: A collaborative team of teachers from Hong Kong, Chinese mainland, and overseas ensures both curriculum rigour and international perspective.
- University Guidance: The dedicated CUGO team starts working with families early, providing personalised support for applications to Hong Kong, Chinese mainland, and overseas universities.

More Than Academics

YCIS follows a philosophy of "three alliances"—with technology, the arts, and benevolence. Students explore beyond the classroom through robotics, theatre, and community service.

One standout is the Career Experience Programme, where students interview with industry mentors across fields like biomedical research and international finance—many of whom are YCIS alumni. It's a glimpse into the real world that sets them apart on university applications.

A School With Deep Roots in Shanghai

Founded in 1993 as Shanghai's first internationally recognised international school, YCIS now serves over 2,200 students from more than 50 nationalities across six campuses. For expat families on the move, transfers within the Yew Chung network—to Hong Kong, Beijing, Silicon Valley, and beyond—are seamless.

Is HKDSE Right for Your Child?

HKDSE isn't necessarily "easier" than A-Level or IB. But it's different. It rewards subject strength, offers genuine language flexibility, and gives students multiple chances to succeed. For students who are strong in STEM, comfortable with bilingual learning, and looking for a globally recognised qualification, it's a smart alternative to the crowded international exam landscape.

Discover the HKDSE at YCIS Shanghai

YCIS Shanghai invites families to learn more through personalised school visits and meetings with the teaching team. Assessments for students aged 13 and above are available, along with guidance on scholarship opportunities.

Bilingual & Local Schools

Find private bilingual and public local schools with international divisions

So... How Chinese Is It?

Expat Families Who Send Their Kids to Local Schools.

By Laurie Muhlauer

An increasing number of expat families in Shanghai are choosing bilingual schools over traditional international ones. For many, it is not just about academics, but about giving their children a deeper connection to China through language, culture, and everyday experience.

Choosing the Bilingual Path

For Amanda, an Asian parent with two children at YK Pao School, the decision came from a gut feeling: a fully international route might leave her children speaking only "taxi Chinese." She wanted them to understand Chinese culture from the inside, not just as outsiders. A Chinese-style academic rigor with some international elements felt like the right balance, even if it leaned more toward a "Chinese school with international flavor."

Sofia, a European parent whose children attend Shenjing Kindergarten, was equally clear that language was the priority. Rather than learning basic phrases, she wanted her child to think in Chinese. She knew these schools would be Mandarin-heavy, with many classes conducted in Chinese and English playing a supporting role. It felt intimidating, but also necessary.

For Lili, a European parent with a child at Wunan Kindergarten, the choice was about balance. She expected structure and rigor, but wanted her child to build strong Chinese while still maintaining their non-Chinese identity. The bilingual path, she felt, was the only way to achieve both fully.

The Language Rollercoaster

All three parents describe the language journey as intense.

Amanda noticed rapid progress. Within a year, her children were not just chatting in Chinese but writing, studying science, and even joking at home in the language.

For Sofia, the beginning was far more difficult. The first three to six months were marked by frustration and exhaustion, with her child often coming home in tears. At one point, she admits: "We kept thinking, 'Did we break our child?'"

Then came a turning point. After a challenging semester, her child suddenly began speaking more confidently. One moment stood out: "One day she was explaining a game to a classmate in Mandarin and we realized, 'Okay... it worked.'"

Within a year, she was not only coping, but enjoying school.

For Lili, the shift felt more gradual. At kindergarten, where most of the day is conducted in Chinese, the immersion felt natural. Over time, she noticed her child singing unfamiliar Chinese songs and even correcting her pronunciation.

Chinese Culture in Everyday Life

Culture, parents say, is not something displayed occasionally—it is woven into daily school life.

At Wunan Kindergarten, Lili describes full celebrations of traditional festivals. Children make mooncakes, learn dragon boat stories, and participate in performances tied to Mid-Autumn Festival, Chinese New Year, and more. At the same time, schools also celebrate international traditions, ensuring children experience both worlds.

As Lili puts it: "Their world gets bigger, not smaller."

Amanda sees culture reflected in behavior as well. There is a strong emphasis on respect, discipline, and good manners, from greeting teachers properly to lining up neatly. Compared to Western schools, the environment feels more structured, but also calmer because expectations are clear.

"We kept thinking, 'Did we break our child?'"

Sofia and her husband whose kids attend Shenjing Kindergarden, a local school in Shanghai

Structure, Expectations—and Yes, Homework

That structure is one of the most noticeable differences.

Sofia describes highly defined routines and expectations, even at a young age. Children are encouraged to stay organized, follow instructions, and function as part of a group. While it can feel more rigid than Western classrooms, it also builds independence early.

In the early years, however, the pressure is lighter. Lili describes kindergarten as a "honeymoon phase," with little to no homework and occasional creative projects.

That changes over time. Amanda notes that while early primary years involve minimal homework, expectations increase significantly around Year 3, reflecting the growing academic rigor of the Chinese system.

Teachers and Classroom Culture

Respect for teachers is another defining feature.

Lili describes a classroom culture where teachers are clearly in charge, yet maintain warm and caring relationships with students. Children are expected to listen carefully and follow instructions, reflecting broader cultural values.

Amanda adds that this respect extends to parents as well. Teachers' feedback is taken seriously, and their opinions often carry significant weight in academic decisions. While this can feel intimidating at first, it also provides a sense of reassurance.

Friends, Competition, and Belonging

Socially, children adapt more easily than many parents expect.

At kindergarten level, Lili describes a playful and cooperative environment, with little sense of competition. As children grow older, academics become more important, but schools continue to emphasize values such as compassion and curiosity.

For expat families, a key concern is whether their children will feel different. Sofia observes that her child participates in the same activities as everyone else, with a clear effort to ensure inclusion rather than separation.

Amanda notes that teachers differentiate based on ability, not nationality. As language skills improve, students are simply treated as part of the group.

"Which, honestly, is exactly what we were hoping for."

Because in the end, it was never just about language, or academics, or even choosing one system over another. It was about helping their children understand where they are, adapt with confidence, and feel a sense of belonging.

And perhaps, without even realising it, they begin to carry a little piece of China with them—wherever they go. SF

Shanghai United International School (SUIS Schools)
协和双语学校

Xiehe EDU, where East meets West

Date founded	Affiliated to Xiehe Education (Founded in 1993)
Grade level	Grades 1 to 12
Curriculum	Chinese National Curriculum/IBDP/IGCSE/A-Level/AP/BC
Languages taught	Mandarin, English
Tuition	Contact campuses for detailed information
Description	Xiehe schools (Shanghai United International School, SUIS) is affiliated to Xiehe Education (PreK-12), which was founded in 1993 in Shanghai and bearing "Developing in Harmony, where East Meets West" as its core value. SUIS schools offer diversified curricula for students aged 6 to 18. At the stages of primary and middle school education, a "dual-channel" path is available to families, and this means that students can choose either overseas or domestic channels for their future university applications - SUIS students actually perform quite well in either direction. In the high school stage, SUIS has introduced various mainstream international curricula that are aligned with reputable and renowned organizations and universities around the world, including the International Baccalaureate Diploma Programme (IBDP) from the International Baccalaureate Organization (IBO), Advanced Level (A Level) courses from the UK, Advanced Placement (AP) courses from the US, and British Columbia (BC) courses from Canada. Most of its graduates have entered world-renowned universities.

When Sports Meet Technology, Children Begin to Grow Proactively

The HADO School Elite League is gaining recognition from more principals and parents

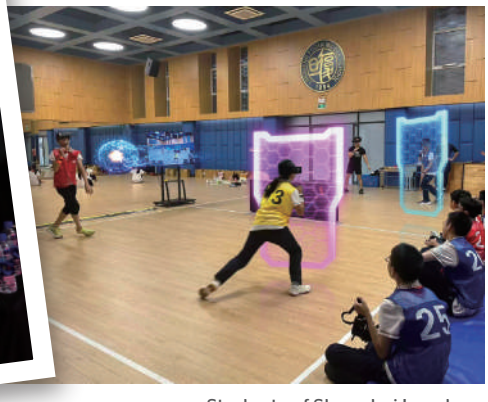

The match enters its final 20 seconds.

Three players quickly adjust their positions: front-line pressure, midfield movement, backline charging. A precise "energy ball" breaks through the opponent's shield—and the venue erupts in cheers.

But after the match, the children don't dwell on the result. Instead, they gather immediately to review—discussing positioning, rhythm, and teamwork.

Students of Shanghai Lansheng Fudan Middle School are practicing HADO.

This is a real scene from the HADO School Elite League in Shanghai.

What is HADO: A Tech Sport That Gets Kids Moving

HADO is a new form of sport that combines AI, augmented reality (AR), physical activity, and team-based competition.

Wearing smart devices, children can release energy balls and deploy shields in a real-world space, while running, jumping, dodging, and coordinating with teammates. This creates a highly engaging environment where virtual and physical interaction merge into real exercise.

There is no physical contact, yet real physical exertion; no high barrier to entry, yet rich in strategy and teamwork. This unique balance is why HADO is rapidly entering schools.

Giving an interview

Why HADO is Entering Schools: A New Educational Need

As education evolves, the role of sports is being redefined. Policies promoting daily physical activity, increased PE hours, and reduced academic overload all point to a broader shift—from score-focused evaluation to holistic development.

Schools and parents are increasingly aligned in recognizing that true competitiveness includes physical fitness, resilience, teamwork, and communication skills.

In this context, technology-integrated sports are becoming a new necessity.

HADO, as a sport that merges AI, AR, and competition, not only meets students' physical activity needs but also aligns with their interest in technology and interactive experiences. It improves engagement while maintaining strong exercise outcomes.

With ongoing policy support and practical implementation, HADO has been introduced into school systems, forming a structured pathway from curriculum to competition, and evolving into the "School Elite League" model.

What Do Children Gain from HADO?

In Shanghai, HADO has already entered multiple primary and secondary schools, forming a clear development pathway. What parents and teachers observe goes far beyond sports performance.

HADO naturally increases participation.

"Xiaoyu is very enthusiastic about training and rarely resists it."
Team awareness improves through cooperation.
"He used to be passive, now he cares about winning and teamwork."
Children become more confident and expressive.
"He was shy before, now he's much more outgoing."
They learn to handle pressure through matches and review.
"He's calmer and more focused under pressure."
Emotional control also improves.
"After losing, he reflects instead of getting upset."
What stands out most in feedback is not results, but change.

Parents describe moments of effort, growth, and confidence. Some families even transition from observers to participants themselves.

These changes emerge gradually through continuous training and competition—and because they are visible, parental recognition continues to grow.

AI-Powered Performance Analysis

HADO also integrates AI-driven performance analysis to support player development.

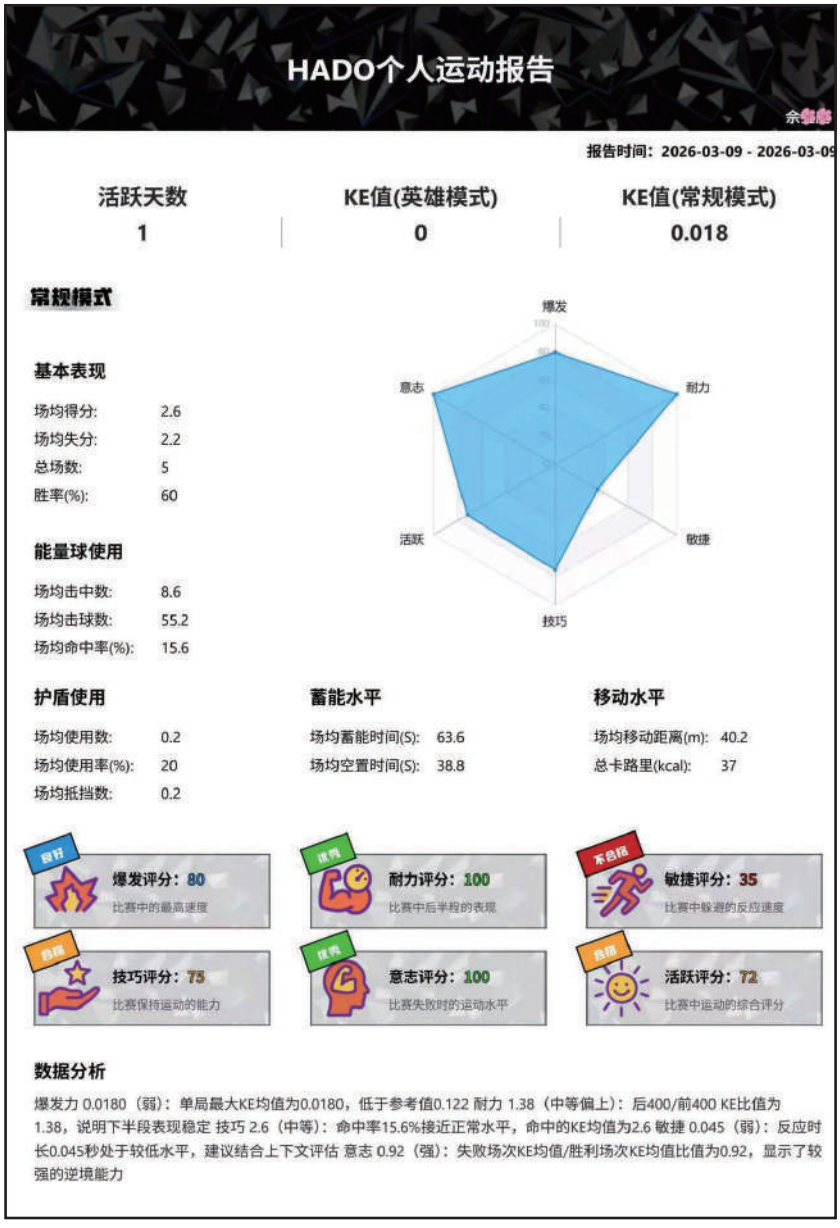

During matches and training, the system tracks key indicators such as movement, reaction time, accuracy, and team coordination, and converts them into intuitive visual reports.

For students, this makes performance visible and measurable, helping them understand how to improve.

For coaches, it enables more targeted and efficient training.

For parents, it provides a clear view of progress beyond match results.

By combining sport with data, HADO creates a structured and transparent growth system.

For Schools: A Practical and Scalable Model

The HADO School Elite League is not just an event, but a sustainable system.

It has already been implemented in multiple schools, including Fudan University Affiliated Fuxing High School, Lansen Fudan Middle School, and Kangde Bilingual School.

Its pathway is clear:
Curriculum → In-school competition → District league → Annual finals

Supported by:

- School team participation
- Dual scoring system (individual + school)
- Tiered competition structure
- Regular monthly events

This creates a complete and operable sports ecosystem within schools.

China-Japan-South Korea
Youth Championship

A Real Path from Interest to Competition

HADO provides a clear pathway from participation to competitive development.

Students can start from school-level leagues and progress to higher-level competitions, eventually reaching international stages such as the HADO World Cup and global tournaments.

For example, the BingoRain Team began as three beginners aged 10–13 and has grown into a competitive team achieving:

- China Cup runner-up
- Global Open Top 8
- China–Japan–South Korea Youth Champion

Their growth reflects not only skill improvement, but also the development of discipline, teamwork, and responsibility.

A New Educational Model Taking Shape

HADO has now entered nearly 20 schools in Shanghai as part of after-school programs.

It demonstrates several key characteristics:

- High participation: students are willing to engage
- Strong continuity: courses and competitions are connected
- Visible growth: progress can be observed
- Strong recognition: schools and parents actively support it

These features make it a scalable and replicable model.

Looking Ahead: From Campus to the World

Starting from the School Elite League, HADO is building a broader platform—developing youth competition systems, establishing a tech sports brand, and sending players to international stages.

In upcoming global events, teams from Shanghai schools will represent Chinese youth on the world stage.

When a child begins to move actively, collaborate with others, face challenges, and express themselves—the value of sport goes far beyond competition.

In a changing educational landscape, what matters is not only better results, but better growth.

The HADO School Elite League is offering a new answer.

Shanghai Family's 21st International SCHOOL EXPO 2026

"Shanghai Family" International Arts Festival
2026春季教育展 – “上海家庭”艺术节

Organizers: Shanghai Family · Parents&Kids Shanghai · 虎媽牛娃 HUMANIUWA

Venue Sponsor: THE PLACE 南丰城

Shanghai Family, Parents&Kids and HuMaNiuWa held the 21st International School Expo at The Place on April 25th, 2026. As one of the most anticipated events of the year, this School Expo saw a lot of parents and kids attend. Our International School Expo was attended by those who are interested in choosing an international education for their kids. This annual event provides a good opportunity where parents and international education brands can communicate face to face.

A Veteran Principal's Reflection: The First Day of Kindergarten Is Harder for Parents Than Children

The early childhood education years lie the foundation of a child's lifelong development. *By Xu Li*

The First Day: It's Harder for Parents Than Children

I was a kindergarten principal who spent nearly 40 years in early childhood education and am now retired. Over the decades, I have watched generations of children grow from timid newcomers into confident graduates, and I have seen parents navigate the joys, anxieties, and uncertainties of raising them.

Kindergarten is never just about play or supervision. In these short years lie the foundations of a child's lifelong development.

Every year, the arrival of new students unfolds like a warm and often amusing "drama." Almost every parent anxiously asks: Will my child cry? Can they adapt to group life?

After 40 years, I can share a simple truth: the ones who struggle most with separation are not the children, but the parents.

A child may cling to your leg, crying, but once you leave, within minutes they are distracted by toys and new friends. Meanwhile, parents linger at the gate, peeking in, wiping tears, worrying all day.

Bring an extra pack of tissues on the first day, not for your child, but for yourself.

Children are far more resilient than we imagine. Letting go is what adults must learn.

When "Perfect" Gets in the Way of Confidence

In our bilingual kindergarten, we have a "Show and Tell" activity where children bring a favorite item and introduce it in Chinese or English. This is often where parents feel the most pressure. Many try to meet adult standards by choosing perfect props, writing scripts, and rehearsing repeatedly.

Yet the more we impose, the more nervous children become.

"Bring an extra pack of tissues on the first day, not for your child, but for yourself."

I remember a boy who had just transferred to our school with limited English. Instead of forcing a perfect presentation, he and his mother made a simple prop with popsicle sticks, drawing small ducks.

When it was his turn, he simply held up the ducks and sang softly, "One little duck went over the river..." counting from one to five.

There were no polished lines, yet the entire class watched in delight.

That moment changed everything. He let go of his fear and began to enjoy expressing himself. Years later, he went on to a well-known middle school in Shanghai and became one of only two students named on the school's honor wall.

A child's confidence does not come from high standards alone, but from feeling respected and accepted.

Protecting curiosity and intrinsic motivation matters far more than simply delivering knowledge.

The "Two-Sided" Child: Why Home Looks Different

Over the years, I have seen many children who seem like "two different people." Recently, a foreign parent came to me, deeply worried about her child.

At school, he was polite and cooperative. At home, however, he resisted homework, shouted, cried, and even lashed out physically. His behavior had led to complaints from neighbors. His mother said helplessly, "At school he is gentle, but at home he becomes a little tyrant."

Instead of criticizing him, I approached him with a playful "emotion scanner."

"Is it the same when you feel angry at school and at home?" I asked.

He thought for a moment. "No. At school, I tell the teacher and sit quietly for a while."

"And at home?"

He hesitated, then admitted everything. I simply listened and told him, "You are being very honest." As he spoke, he relaxed, and his guard dropped.

Home is the safest place. Only in front of those they love most do children feel free to release their true emotions.

In these moments, shouting or forcing change is ineffective. The key is to first accept emotions, then guide expression.

What Really Matters in the Early Years

After nearly 40 years, I have come to a simple understanding. The kindergarten years are not about how many words a child learns or how much knowledge they gain.

They are about protecting a child's sense of wonder, nurturing confidence and courage, and allowing them to grow into themselves.

Every child is a unique little world, growing at their own pace. Parenting is never easy. There is anxiety, confusion, and moments of overwhelm. Yet when children grow older, those tearful mornings, funny moments, and small milestones become some of life's most precious memories.

Kindergarten years are short, but they carry lifelong significance. When we learn to understand, respect, and follow a child's natural development, we begin to see the shape of their future.

May every child shine brightly in kindergarten. And may every parent learn to let go, and patiently watch them grow. SF

Xu Li is our Shanghai Family early childhood education writer. With nearly four decades of teaching and leadership experience at a bilingual kindergarten, she now focuses on guiding families and supporting children's development.

This is an English translation of the original Chinese article written by the author.

Fortune Kindergarten
海富幼儿园

"Fortune Kindergarten's international education encourages personal, and academic development, nurturing our students into adaptable, moral, thoughtful, and co-operative individuals."

Date founded	1998
Grade level	Baby class to Kindergarten (18 months to 6 years)
Curriculum	School-based international, thematic, English and Mandarin bilingual Early Years Program
Languages taught	English, Mandarin
School strengths	Bilingualism, After-school clubs, Multiculturalism
Tuition	¥9,600 – ¥17,000/month
Description	Fortune Kindergarten is unique, with a proud tradition in early childhood education. Our goal is to accomplish bilingualism through an East-meets-West internationally recognised curriculum. The approach of emphasizing personal and academic student development has been embraced by hundreds of families since the school's founding. The school culture and curriculum stimulates children in all areas of their development, ensuring they enjoy the process of learning while attaining excellent personal values and academic skills.

Melodie International Preschool & Kindergarten

"Where learning is fun"

Date founded	2005
Grade level	Infant class, Preschool, Kindergarten
Curriculum	British EYFS, Orff Music, Drama, Kungfu, Dance
Languages taught	English, Mandarin
Tuition	¥7,000- ¥8,000/month
Description	Melodie International has two private preschools and one kindergarten. Our mission is "to help children grow happily in a safe, supportive and comfortable learning environment. Here they can develop at their own pace, while having fun and enjoying the magic of their childhood." Our curriculum combines both English and Chinese elements, but both are inspired by STEAM and the British EYFS. We advocate fun-based learning to create an environment where children are confident, sociable, adventurous and build life skills to be ready for their next step in education.

ELG Full Day Program
学建全日制项目

"Empowering All Learners: Building #ELGCommunity Where You Belong"

Date founded	2006
Grade level	Early Intervention (ages 3-6), Young Learners (ages 7-14) Pre-Vocational program (above age 14)
Curriculum	Our curriculum is guided by an Individualized Development Plan, specific goals tailored to each student's unique needs and strengths. These goals span academics, cognitive development, speech-language communication, gross and fine motor skills, emotional and social growth, self-help skills, and sensory development. Engaged learning takes place through classroom activities, small group and one-on-one sessions, community exploration, vocational experiences, and theme-based projects. Each program incorporates research-based best practices and follows strengths-based, neurodiversity-affirming approaches to create a supportive and empowering environment. Extra-curricular services, including horseback riding and mixed martial arts, are offered by external community partners.
Languages taught	Bilingual program in English and Chinese
Tuition	2025-26 School Year: Full-day ¥400,000
Description	We provide personalized, full-day programs for neurodivergent learners with autism, ADHD, developmental delays, sensory processing differences, etc. With a 1:3 educator-to-child ratio, our team—including special educators, speech-language pathologists, occupational therapists, counselors, art and music therapists, and physical educators—designs learning experiences for each student's strengths, interests, and communication style. Together with parents, we develop an IDP tailored to each child's goals. Parents receive daily updates and are invited to join regular training sessions, social events, and support groups. In our community, every child—and every family—is seen, supported, and empowered to grow.

Larry Li
Executive Chinese Chef

With over 20 years of experience, Chef Larry Li brings a calm, confident approach to the kitchen. Guangdong-born, he blends classic Huaiyang techniques with a modern Shanghai sensibility.

Steamed Baby Lobster and Shredded Tofu in Superior Soup

Refined Huaiyang cuisine, reimagined for Shanghai

A dish defined by precision and balance.

Inspired by Wensi Tofu, known for its fine knife work, it showcases the elegance of Huaiyang cuisine in a contemporary form.

The broth draws from fermented flavours of Yunnan and Guizhou. Tomato and chili bring a gentle sourness, while Yunnan litsea cubeba adds a light citrus lift.

Sweet lobster and silky tofu come together in a clean, layered profile.

Delicate, refined, and quietly memorable.

INGREDIENTS (Serves 2-3)

- *2 baby lobsters (200-250g each)*
- *3 eggs*
- *300 ml lobster broth*
- *150 g soft tofu*
- *2 tomatoes*
- *1 small red chili (optional)*
- *1-2 drops Yunnan litsea cubeba oil*
- *Salt*

METHOD

1. Remove lobster meat. Reserve shells.
2. Simmer shells in 500 ml water for 15-20 minutes. Strain.
3. Beat eggs with 300 ml broth and salt. Strain and steam 8-10 minutes until set.
4. Simmer tomatoes with chili to create a light sour broth.
5. Cut tofu into fine shreds. Blanch briefly in the broth.
6. Steam lobster meat for 3-4 minutes.
7. Layer tofu and sour broth over custard. Top with lobster.
8. Finish with litsea cubeba. Serve warm.

Jiangnan Wok began in Nanjing and is known for refined Huaiyang cuisine, recognised by the Michelin Guide 2025 and consistently listed in the Black Pearl Restaurant Guide.

Its Shanghai opening marks its first expansion beyond Nanjing. Under Chef Joe Hou, founder of the original Jiangnan Wok and Area Executive Chinese Chef of Shangri-La Group, the restaurant stays rooted in tradition while evolving for a new city.

The space is elegant yet welcoming, with an open kitchen and six private dining rooms. Modern design is paired with subtle Chinese elements for a comfortable, elevated experience.

HILTON SHANGHAI CITY CENTER

DESCRIPTION

Hilton Shanghai City Center is located between the vibrant Jing'an and Changning Districts, fusing classic Shanghai architecture and contemporary design. Guests are welcomed with a true Shanghainese experience, starting with personalized service and the scent of gardenia.

Features

Hilton Shanghai City Center embodies "At the Center of It All," seamlessly blending classic and contemporary design elements. Drawing inspiration from Shanghai's iconic old villas, the hotel's interior combines modern luxury with traditional Shanghainese charm. Refined touches such as the original pipe organ enhance the hotel's heritage while providing guests with a unique atmosphere. The design uses muted tones, soft furnishings, and balanced layouts to create a calm and sophisticated ambiance. Location

The convenient location on Yan'an West Road offers easy access to major transport hubs, business districts, and iconic landmarks such as Jing'an Temple and People's Square. The hotel is perfectly placed for guests to explore Shanghai's dynamic cultural offerings, including trendy retail hubs and historic streets like Yuyuan Road. Whether visiting for business or leisure, Hilton Shanghai City Center provides an ideal base for discovering the best of Shanghai.

Facilities

Hilton Shanghai City Center features 381 guest rooms and suites, offering guests a comfortable and stylish stay. The hotel boasts over 1,000 square meters of flexible meeting and banquet space, including a 432-square-meter pillarless ballroom. Guests can also enjoy a range of dining options, including Osteria Twelve 16 Italian Restaurant, and Executive Lounge. Other facilities include a well-equipped fitness center to provide an all-encompassing experience of relaxation and convenience.

Services

Guests can enjoy personalized concierge service, high-speed Wi-Fi, and flexible check-in and check-out options. The hotel also offers 24-hour room service, valet parking, and laundry services. For business guests, the hotel provides state-of-the-art meeting and event facilities, complete with AV equipment and dedicated support staff. Additionally, Hilton Honors members enjoy exclusive benefits such as instant discounts, flexible payment options, and a range of digital services through the Hilton Honors app.

Glossary

A-Levels: A qualification programme typically taken during the final two years of secondary school in the British education system. Students specialize in subjects for examination.

ACT: A standardized test used in the United States to assess student achievement in English, Mathematics, Reading, Science, and Writing. An alternative to the SAT for college applications.

Advanced Placement (AP): A programme run by the US-based College Board offering college-level courses and exams to high school students. AP exams can enable students to earn college credit.

American Curriculum: A US-style curriculum typically based on state standards such as the Common Core, including subjects like English Language Arts, Mathematics, Science, and Social Studies. Follows Kindergarten to Grade 12 (K–12) numbering.

AP Capstone: An AP diploma programme built on the AP Seminar and AP Research courses to complement in-depth, discipline-specific study provided through the AP courses.

British Columbia (BC) Curriculum: Follows the official government curriculum and educational standards of British Columbia, Canada.

British Curriculum: Follows the National Curriculum of England, where learning materials are produced in the UK. Typically culminates in IGCSEs and A Levels. Follows Year 1 to Year 13 numbering.

Chinese National Curriculum: Follows the official Chinese government curriculum requirements for Chinese nationals of mandatory school age up to Grade 9.

EAL / EFL / ESL: Programmes designed to support students learning English as an additional, foreign, or second language within full-day programmes and individual tutoring during non-school hours.

Early Years Foundation Stage (EYFS): The British government's framework for the learning and development of children under age 5.

French Baccalauréat: Also known as Le Bac, this is the French national secondary school qualification.

German DIA: The Deutsches Internationales Abitur (DIA) is the German international secondary school diploma awarded by German international schools.

HKDSE: Hong Kong Diploma of Secondary Education is a standardized examination for senior secondary school students. It serves as a qualification for university admissions.

IB (PYP / MYP / DP / CP): The International Baccalaureate Programme includes Primary Years, Middle Years, Diploma Programme, and Career-related Programme. The DP requires six courses, Theory of Knowledge (philosophy), and a 4,000-word Extended Essay. The IBDP is accepted in college applications worldwide.

IGCSE: The International General Certificate of Secondary Education is taken between the ages of 14 and 16. Students are required to study core topics along with a selection of optional topics. Students move on to study AP, IB, A Levels, or other pre-university programmes.

IPC: The International Primary Curriculum instills in children a desire to learn by focusing on thematic topics and subject matter knowledge, skill, and understanding.

Japanese EJU: The Examination for Japanese University Admission for International Students is a standardized test used to assess the academic ability and Japanese language proficiency of international students applying to Japanese universities.

Montessori: A theory of education characterized by freedom within limits, thus facilitating the development of the child's independence. Methods focus on the child's natural learning process, honed by independently working with materials rather than direct instruction.

SAT: A test used in the United States for college and university admissions. The test comprises three parts: Evidence-Based Reading, Writing and Language, and Mathematics.

STEM: Science, Technology, Engineering, and Mathematics. The suite of subjects relating to these fields of study. Sometimes written with Arts included as STEAM.

TOEFL: Test of English as a Foreign Language assessing English proficiency. International students applying to English-speaking universities are required to take the TOEFL exam.

2026 STUDENT VOICES

Speech Competition 演讲比赛

Young Voices for AI Choices

智启未来，少年新声

The semifinals of the 2026 Student Voices English Speech Competition have successfully concluded! The theme of the competition was “Young Voices fo AI Choices | 智启未来 少年新声”. The event was jointly organized by Shanghai Family, Parents & Kids, and HuMaNiuWa. With the theme “Young Voices for AI Choices”, the 2026 Student Voices initiative aims to encourage young people of all ages to explore the value of AI, allowing youthful perspectives to inject warmth and direction into the intelligent era. PETRONAS China, our official partner of the 2026 Student Voices, is a progressive energy and solutions partner committed to exploring new energy sources.

School Visit Checklist

Cut out and make several copies to bring along to each school.

School name: _____

Address: _____

Phone: _____

School size: _____ Student nationalities: _____

The school offers:

- ☐ Air purification system
- ☐ AP courses
- ☐ Band/music classes
- ☐ Boarding
- ☐ Buses for after-school activities
- ☐ Clean facilities
- ☐ Competitive sports
- ☐ Computer lab
- ☐ Counselling services
- ☐ ESL/ESOL/EAL
- ☐ Gymnasium
- ☐ IB Programme
- ☐ Library
- ☐ PTA/PTO
- ☐ Safe & secure campus
- ☐ Sports fields/courts
- ☐ Swimming pool
- ☐ Theatre/auditorium

Your observations:	Notes:
1. Are students engaged, attentive, and happy?	
2. Do students treat others with respect?	
3. Do students seem prepared for class?	
4. Describe the overall "look & feel" of the school.	
5. How does your child feel about the school?	

Questions to ask administrators:	Notes:
1. What sets your school apart from the others?	
2. What are your academic and behavioural expectations for students?	
3. Do you have resources for students with learning disabilities?	
4. What is your teacher-to-student ratio?	
5. How do you hire teachers?	
6. How do you assess teacher performance?	
7. In what ways are parents involved at school?
